

PassivController

How it works

PassivController is your window into the PassivLiving system. This lightweight, wireless touchscreen can be wall-mounted or free-standing in your kitchen or hallway. Battery power means you can also carry your PassivController from room to room if you want.

With a full-colour pixel LCD screen, you get clear at-a-glance information far in excess of traditional boiler controllers, timers, programmers, or even the new generation of energy displays.

PassivController is just one way of interacting with PassivEnergy™ and our complete range of PassivLiving™ services as they are launched. You will also be able to access all of our services through any web-enabled device.

Making it easy

We know how hard most new technology can be to use, so we've focussed particularly on making PassivController easy-to-use for everyone.

PassivController aims to talk your language, to ask you what you prefer, and how you live your life, not to demand that you understand how it works.

Upgradeable

Just like PassivHub, we keep your PassivController up-to-date with the latest features. We won't surprise you with sudden and confusing changes, but over time you'll notice that you can do more.

Adaptable

Because PassivController is so flexible, we can change the way it works to suit particular situations. If you have a commercial opportunity with a special need, why not let us know what you'd like to see?

The smart way to manage your home

Specifications

Part number	PL-DCB-Z-100
Dimensions	90 x 100x 22mm (width x height x depth), excluding stand
Power supply	External 230v AC / 5v DC DC PSU
Energy consumption	1W(max) charged; 3w (max) charging
Battery life	4 hours, internal rechargeable
Resolution	272 pixels wide x 480 pixels high 4096 colours, touch screen
Wireless connectivity	Secure mesh radio link
Buttons	None
Firmware	Proprietary firmware; remotely upgradeable
Included in package	PassivController; mains PSU; wall-bracket; table-stand
Minimum requirements	Installed PassivHub
Certifications	CE
Warranty	12 months
Availability	May 2010
